

The Outlet - Banbridge

Saturn LED makes a wave with external lighting solutions for The Outlet in Banbridge...

Home to more than 45 of the world's best known retail brands, The Outlet has grown to become a hugely popular shopping and leisure destination with visitors from both Northern Ireland and the Republic of Ireland.

This impressive retail setting has now been significantly improved with the addition of new LED exterior lighting across the extensive car-park.

Tasked with enhancing the lighting to make it safe and secure, reducing energy costs was also high on the agenda for Saturn LED. The WAVE 5700 LED street lights complemented by TITAN - a high quality IP65 diecast LED floodlight proved the perfect choice.

The WAVES'S unique diecast mould offers precision design as well as excellent lumen packages. Manufactured using Cree chips, it also comes with an adjustable spigot. This was complemented by TITAN - a high quality IP65 diecast LED floodlight that is a modern alternative to the traditional floodlight.

Available in standard and PIR options, suitable for both domestic and commercial applications, The TITAN offers the latest in LED technology.

Kirk Tweed, National Specification Manager at Saturn LED, said, "Our focus was on providing visually impressive lighting that also reduced energy costs. We worked closely with The Outlet to ensure we found the right solutions that met their specific requirements.

"We carried out a complete lighting design for the project and provided complete lighting calculations outlining the potential savings. These services are hugely important and make a real difference when companies are deciding how to upgrade their lighting."

He added, "We have a lot of success within the retail sector, both with internal and external lighting. The beauty of our extensive lighting means we can offer solutions that fit perfectly with the project."

The Outlet features two impressive external lighting solutions - WAVE LED street lights and TITAN floodlights.

Product Focus

The Outlet features two impressive external lighting solutions - Wave LED street lights and Titan floodlights...

Key Features Of Wave Street Lights:

- 50,000 hours' lifespan.
- Safety isolation system.
- IP66 and IK09.
- CREE chips.
- LED on metal core PCB.
- Meanwell driver.
- RAL9007.
- Tool-free access.
- 60mm Spigot66.

Key Features Of Titan Floodlights

- IP65 rated.
- Diecast aluminium slimline casing.
- Shock-resistant glass.
- 1 metre pre-wired flex.
